

MS1 Statistics and Data for HSA Library Peptide Identifications

**Peptide class
(C- Common, U - Unusual)**

Type	Class	Peptide Description
C	1	Simple Tryptic
C	2	Tryptic with Expected Missed-Cleavage
C	3	Common Modifications
C	4	In-Source Semitryptic
U	5	In-Solution Semitryptic
U	6	Artifacts and PTMs
U	7	Unexpected Missed-Cleavage
U	8	Under/Over Alkylation
U	9	Unidentified Modifications

Note: (1) The following statistics was obtained from the LC/MS analysis of tryptic digestion of HSA. The consensus spectra of the 2,753 peptide ions were derived from 1,474 LTQ and 320 LTQ/Orbitrap runs. To better represent the most commonly used analytical protocols, certain special runs were excluded such as without reducing or alkylating agents. (2) This analysis includes 64 small peptides containing from 2 to 5 amino acid residues and excludes 122 peptide ions from the Human Peptide Library. (3) MRAB: the relative abundance of each ion was derived by dividing this by that of the largest identified ion in a run. MRAB is the median of the relative abundance values obtained from all LC/MS runs where the ion is identified. (4) PIIF: the fraction of runs that an ion was identified, excluding special cases as described before.

Peptide	Charge	Modification	Peptide class	Instrument	m/z	Median relative abundance (MRAB)	Peptide ion identification frequency (PIIF)
